Hurricane Matthew passed through many of the Islands of the Bahamas between October 5 to 8, 2016.

Technically you cannot calculate a % increase from zero, but 100% was inserted manually in the above tables in some

instances and used as placeholders to show that there were significant increases between 2020 and 2021 in the period. **The figures are preliminary and subject to revision.**

2nd and 3rd ports of entry for cruise calls are only to be used if an analysis is being done by individual island and you

do not want the count for the Bahamas as a whole. If you want a count for the Bahamas as a whole you must look at 1st port of entry only to avoid double counting.

Technically you cannot calculate a % increase from zero, but 100% was inserted manually in the above tables in some

instances and used as placeholders to show that there were significant increases between 2020 and 2021 in the period.

2nd and 3rd ports of entry for cruise calls are only to be used if an analysis is being done by individual island and you

do not want the count for the Bahamas as a whole. If you want a count for the Bahamas as a whole you must look at 1st port of entry only to avoid double counting.

Technically you cannot calculate a % increase from zero, but 100% was inserted manually in the above tables in some

instances and used as placeholders to show that there were significant increases between 2020 and 2021 in the period.
